**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

**Claims 1-5, 8-9 are rejected under 35 U.S.C. 102(e) as being anticipated by Rosa et al. (6632374).**

Rosa et al. teaches an optical switching device comprising a plurality of input/output ports for inputting/outputting optical signals, and switching means for switching between input/output optical paths of the input/output ports (e.g., fig. 1); said switching means having; an optical member for reflecting an optical signal inputted from any of the plurality of input/output ports toward another of the input/output ports (e.g., fig. 1); a first driving means for driving said optical member so as to switch between input/output optical paths of the input/output ports (e.g., see figs. 4a-5); and a second driving means for driving said optical member so as to displace between a position to reflect the optical signal in a direction toward the input/output port and a position to reflect the optical signal in a direction deviated from the direction toward the input/output port (e.g., figs. 5, 10; col. 1 lines 35-40).

Thus claim 1 is met.

Art Unit: 2883

Regarding claims 2-5, 8, and 9 the reasons and references above cite the structure needed to fully meet each and every element of each one of said claims 2-5, 8, and 9 (e.g., figs. 5, 10; col. 1 lines 35-40). Thus claims 2-5, 8, and 9 are met.

### ***Allowable Subject Matter***

Claims 6-7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art, either alone or in combination, does not disclose or render obvious the unique combination of each and every specific element stated in either of claims 6 or 7.
